Profile

AI Backend Engineer with expertise in Python, microservices, and Generative AI systems. Experienced in building **LLM-powered applications** using LangChain and Hugging Face, and designing scalable REST API architectures. Demonstrated impact in improving backend performance (20%+) and database efficiency (30%+). Strong in system design, problem-solving, and deploying production-ready AI systems.

Experience

Cloud BC Labs

Software Engineer

Bangalore

2025–Present

- Engineered an **AI recruitment platform** using **LangChain + LLMs**, automating resume parsing, candidate ranking, and interview workflows.
- Designed **scalable microservices architecture** enabling modular AI pipelines and independent service scaling.
- Built a **candidate scoring and ranking engine**, improving screening efficiency and decision consistency.
- Developed **LLM-based interview generation and automated communication system** using prompt engineering.
- Delivered backend services for **Hospital Management System (HMS)**, supporting scheduling, billing, and reporting workflows.

Test Yantra

Associate Software Engineer

Bangalore

2024–2025

- Improved backend system performance by **20%** through optimized Python services and API design.
- Built scalable REST APIs using **Django and Flask** following modular architecture principles.
- Reduced database query execution time by **30%** via indexing and query optimization techniques.

Garuda Aerospace

R&D Intern

Chennai

2022–2024

- Developed **IoT-based drone monitoring systems** integrating sensors and real-time data pipelines.
- Built real-time data processing solutions for surveillance and tracking applications.

Key Projects

AI Recruitment Platform: Built an end-to-end **LLM-powered recruitment system** with resume parsing, candidate scoring, and automated interview workflows. Designed scalable backend APIs and modular AI pipelines using LangChain.

Hospital Management System: Developed backend architecture for patient records, billing, and reporting using REST APIs and scalable service design.

Technical Skills

Languages: Python, Java, JavaScript

Backend: Django, Flask, REST APIs, Microservices

AI / ML: LangChain, LLMs, Hugging Face, NLP, Prompt Engineering, RAG

Database: MySQL, SQL, Query Optimization, Indexing

Cloud / DevOps: AWS, Docker, Jenkins, Git

Core CS: Data Structures, Algorithms, System Design

Problem Solving: 150+ LeetCode problems

Education

Agni College of Technology

M.E. Mechatronics

CGPA: 8.35

2022–2024

Dr. Ambedkar Institute

B.Tech ECE

CGPA: 7.73

2018–2022

Achievements

- Published research paper in IRJET.
- Awarded Letter of Appreciation for technical contributions.
